Statistical Data Visualization With Seaborn

The Python visualization library Seaborn is based on matplotlib and provides a high-level interface for drawing attractive statistical graphics.

Make use of the following aliases to import the libraries:

```
>>> import matplotlib.pyplot as plt
>>> import seaborn as sns
```

The basic steps to creating plots with Seaborn are:

- 1. Prepare some data
- 2. Control figure aesthetics
- 3. Plot with Seaborn
- 4. Further customize your plot

1 Data

Also see Lists, NumPy & Pandas

Seaborn also offers built-in data sets:

```
>>> titanic = sns.load_dataset("titanic")
>>> iris = sns.load_dataset("iris")
```

2

Figure Aesthetics

Also see Matplotlib

```
>>> f, ax = plt.subplots(figsize=(5,6)) Create a figure and one subplot
```

Seaborn styles

(Re)set the seaborn default Set the matplotlib parameters Set the matplotlib parameters

Return a dict of params or use with with to temporarily set the style

Context Functions

```
>>> sns.set_context("talk")
>>> sns.set_context("notebook",
font_scale=1.5,
rc={"lines.linewidth":2.5})
```

Set context to "talk"
Set context to "notebook",
Scale font elements and
override param mapping

Color Palette

```
>>> sns.set_palette("husl",3) Define the color palette
>>> sns.color_palette("husl") Use with with to temporarily set palette
>>> flatui = ["#9b59b6","#3498db","#95a5a6","#e74c3c","#34495e","#2ecc71"]
>>> sns.set_palette(flatui) Set your own color palette
```

3

Plotting With Seaborn

Axis Grids

```
>>> g = sns.FacetGrid(titanic,
                      col="survived",
                      row="sex")
>>> g = g.map(plt.hist,"age")
>>> sns.factorplot(x="pclass",
                   y="survived",
                   hue="sex",
                   data=titanic)
>>> sns.lmplot(x="sepal_width",
               y="sepal_length",
               hue="species",
               data=iris)
>>> h = sns.PairGrid(iris)
>>> h = h.map(plt.scatter)
>>> sns.pairplot(iris)
>>> i = sns.JointGrid(x="x",
                       y="y",
                       data=data)
>>> i = i.plot(sns.regplot,
               sns.distplot)
>>> sns.jointplot("sepal_length",
                   "sepal width",
                   data=iris,
                    kind='kde')
```

Subplot grid for plotting conditional relationships

Draw a categorical plot onto a Facetgrid

Plot data and regression model fits across a FacetGrid

Subplot grid for plotting pairwise relationships
Plot pairwise bivariate distributions
Grid for bivariate plot with marginal univariate plots

Plot bivariate distribution

Categorical Plots

Scatterplot

Scatterplot with one categorical variable

Categorical scatterplot with non-overlapping points

Bar Chart

confidence intervals with scatterplot glyphs

Show point estimates and

Show count of observations

Point Plot

linestyles=["-","--"])

Show point estimates and confidence intervals as rectangular bars

Boxplot

Boxplot

Boxplot with wide-form data

Violinplot

Regression Plots

Plot data and a linear regression model fit

Distribution Plots

Plot univariate distribution

Matrix Plots

>>> sns.heatmap(uniform_data,vmin=0,vmax=1)

Heatmap

4

Further Customizations

Also see Matplotlib

Axisgrid Objects

Remove left spine
Set the labels of the y-axis
Set the tick labels for x
Set the axis labels

Set the limit and ticks of the

Plot

```
>>> plt.title("A Title")
>>> plt.ylabel("Survived")
>>> plt.xlabel("Sex")
>>> plt.ylim(0,100)
>>> plt.xlim(0,10)
>>> plt.xlim(0,10)
>>> plt.setp(ax,yticks=[0,5])
>>> plt.tight_layout()
```

Add plot title
Adjust the label of the y-axis
Adjust the label of the x-axis
Adjust the limits of the y-axis
Adjust the limits of the x-axis
Adjust the limits of the x-axis
Adjust a plot property
Adjust subplot params

Also see Matplotlib

5 Show or Save Plot

Close & Clear

Also see Matplotlib

>>> plt.cla()
>>> plt.clf()
>>> plt.close()

Clear an axis Clear an entire figure Close a window
